

3M PRESTIGE WINDOW FILMS

Until recently, most window films that rejected heat were tinted dark, used metal or were highly reflective. Over the years, various other companies have tried to create a clear window film with mixed results. While they were able to achieve improved performance their drawbacks made them unacceptable for most fine homes. Because these films used metal, they were susceptible to corrosion in coastal environments and interfered with mobile reception. Because 3M Prestige Window Films use no metals, they are the first films to offer a variety of selections that eliminate these problems and perform to the industry's highest standards.

With 3M Prestige Window Films, your home's exterior stays beautiful and from the interior, your view is as clear as your original window.

REFLECTIVITY THAT'S ACTUALLY LOWER THAN GLASS

3M Window Films are designed to reduce the effects of solar heat and visible light on your furnishings and will block up to 99% of the sun's harmful ultraviolet rays, which are the single largest cause of fading. Depending on the film you choose, you can enjoy a 79% reduction in the sun's heat. While no Window Film can stop fading completely, our Window Films dramatically slow the progress of fading to keep your home looking beautiful.

SUPERIOR HEAT REJECTION

For most people, there are two primary reasons for installing window films: rejecting heat to increase comfort and fade protection from damaging UV rays for furnishings. 3M Prestige Window Films do both remarkably well.

While some films claim similar performance, the fact is that their performance is only similar when tested perpendicular to the sun, which only can happen at relatively cool times of sunrise and sunset. Our 3M Prestige Window Films reject up to 97% of the sun's infrared light to help keep your home or business cool and lower your energy bills.

CLEARLY SUPERIOR

There are thousands of window film dealers in the country, but only a select few such as Climate Insulating Products have been chosen to be a 3M Prestige Window Films Dealer. We have been selected because of our ability to offer quality work, our extensive product knowledge, and our ability to serve our customers to the highest standards.

COMMERCIAL BENEFITS

A new standard of performance

By letting natural light complement or replace artificial light in your building you can enjoy tremendous advantages. The most obvious being lower energy costs for lighting. Day lighted spaces can also demand higher lease prices and experience less turnover because occupants of day lighted spaces can be more productive and satisfied with their work. By using Prestige Window Film, you can enjoy all the advantages of bringing light into your building with none of the disadvantages. So you save money two ways: lower lighting cost plus lower cooling cost thanks to our superior heat rejection.
